

## BUSINESS INTEGRATION CLUSTER PERFECT COMPONENTS

### More success thanks to more added value

It is becoming more and more difficult to cope with the bulk of data that accumulates in company networks. That's why it is all the more important to render processes transparent. Having an efficient, central integration platform helps.

**edbic** connects up all those involved in the value-added chain, visualises the business processes and thus ensures clarity and stability, for example in internal operations (A2A) or the exchange of data with business partners (B2B).

### edbic

- ready to use quickly
- noticeable acceleration of business processes
- optimum process overview
- preconfigured sequences for various areas of application
- less administrative work and effort
- central system for A2A and B2B as SAAS ('software as a service'), or on customer's premises

f

## FAST AND FLEXIBLE INTEGRATION

### Innovative interplay

The modern business integration suite **edbic** supports the concepts of enterprise service architecture and event processing.

The suite combines any number of endpoints, data sources, applications, services, interfaces and workflows in such a way as to create a single, continuous process, orchestrated by **edbic**.

### edbic as Software as a Service (SaaS)

- multi-client capability: individual edbic entities serve a large number of users in a common environment
- horizontal scalability: system capacity can be dynamically adapted and large sets of data ('big data') processed fast
- NoSQL database: large sets of data can be administered efficiently in structured systems

**edbic can be used individually and in line with demand, both on shared or private platforms and in the company's own services.**

### edbic supports relevant system requirements

- protocol mediation: hook-up of various different communication protocols
- document translation: data / news mapping in various different syntax formats
- data validation: data enrichment, data filtering
- connectors: cloud applications, on-premise software
- developer toolkit: supporting the development of adaptors and connectors
- routing & orchestration

### edbic highlights

#### Fast and flexible

- commissioning in just a few hours
- implementation of new processes within days
- access to index
- optimum capacity utilisation – no overcapacities
- automated deployment
- end-to-end scalability

#### Simple

- central platform for internal and external integration processes
- simple IT architecture
- uncomplicated introduction and easy handling
- convenient maintenance through open system standards

#### Efficient

- additional system environments available without any procurement work
- possible to set up any number of processes
- large number of open standards and architecture components can be used

#### Transparent

- integrated monitoring of business processes
- real-time transparency and SLA (service level agreement) information
- convenient event monitoring
- intelligent management of cloud environments
